Attention: Dow Silicones Corporation Customer

Re: **Compatibility of DOWSIL™ 982 Silicone Insulating Glass Sealant**

The Dow Chemical Company is a leading manufacturer of silicone sealants used in Insulating Glass manufacturing. As a service to our customers, Dow will provide compatibility testing to verify the impact of contact between Insulating Glass Unit components and DOWSIL™ secondary sealant.

To understand the significance of compatibility between Dow secondary sealants used in the manufacture of Insulating Glass units and other sealants and components it is first important to define the level of contact that the DOWSIL™ sealant is expected to experience with the other sealants and components.

- Full Contact – The sealant or component is expected to be in direct contact with the DOWSIL™ secondary sealant throughout the life of the installation.
- Incidental Contact – Because of issues such as product squeeze out or the slight shifting of components, the sealant or component may contact some small area of the DOWSIL™ secondary sealant during the life of the installation

The following materials are approved for full or incidental contact with DOWSIL™ 982 Silicone Insulating Glass Sealant. Other products may be submitted to the Dow Americas Testing Laboratory for compatibility testing and evaluation:

- DOWSIL™ 983 Structural Glazing Sealant
- DOWSIL™ 995 Silicone Structural Sealant
- DOWSIL™ 795 Silicone Building Sealant
- DOWSIL™ 791 Silicone Weatherproofing Sealant
- 100% Silicone Setting Blocks

On behalf of Dow, we appreciate your business and your commitment to silicone technology. If you have any further questions, please feel free to contact us.

Sincerely,

Dow Silicones Corporation
