

# HAYSSEN VERUS 45 IM VFFS LINE

Vertical Form Fill and Seal – or VFFS – is one of the most common filling systems in packaging today. Getting it right is critical for everyone across the value chain. **That's why Pack Studios-Freeport offers this Hayssen Verus 45 IM VFFS line – and a host of auxiliary testing facilities – to our customers.** To make sure everything is right. And correct it if it isn't. And we can do it here, together, without disrupting our customers' production schedules, or waiting for limited line time elsewhere.

## Known & trusted

Hayssen is a trusted name in the packaging industry. Their equipment is known around the world. As modestly as possible, we'll say Dow – and Pack Studios – is a trusted name in packaging, too. Together, the Hayssen VFFS line and Pack Studios' menu of developmental, fabrication, testing, and collaborative resources combine to offer an incomparable environment for testing VFFS packaging.

## Versatile & fast

What's getting formed, filled, and sealed? Our customers need versatility equal to their imaginations. The Hayssen Verus offers options for quad, flat bottom, gusseted, pillows, and resealable zippers. And whichever format, the speed is impressive, too – up to 110 bags per minute. That means a lot of test runs can get done quickly.

## Testing & testing some more

With the Hayssen Verus, customers have time to test a variety of pouch formats against real-world conditions: coefficient of friction, machinability, film durability, and more. And the auxiliary testing available at Pack Studios offers a multitude of options after filling – from drop tests to leak tests to sealant testing.

VFFS lines are used to package a wide variety of contents. Our customers need all those options. From powdered mixes to pet foods, laundry detergents to lawn and garden supplies, this VFFS line is ready to drop just about anything down the hopper and into a package. Let's test!

The footprint of the VFFS line is but a small portion of its value to our customers. Because at Pack Studios, it's about more than the machines. From start to finish, customers are welcomed and engaged and enveloped in a fellowship. We're here to collaborate and innovate everywhere along the way. It's about your success, not our stuff.

We're here to help accelerate more sustainable packaging – designed for recyclability – for virtually any end-use applications. And giving customers access to equipment like the Hayssen Verus – and all the valuable data it provides – is just one way it happens. For 10 years and counting, Pack Studios has led the way. And with on-going updates like the Hayssen Verus, the future is in the bag.
