Disclaimer: Contained in this package is a sample prepared as per the formulation described on this card. Any variation in the formulation may cause performance to change.

### Procedure:

1. Combine phase D ingredients together in a beaker. Under a water bath, heat to 45°C with agitation (±20 minutes). Then leave to cool down.
2. Separately, mix the first two phase A ingredients with spatula. Add remaining phase A ingredients. Heat to 80°C under agitation (500-600 rpm) until homogeneous.
3. Add phase B to phase A and increase mixing speed to 900 rpm, ensuring powder is incorporated well.
4. In a separate vessel, combined phase C ingredients and heat to 80°C.
5. Increase mixing speed of phase AB to 1300 rpm and add phase C to phase AB.
6. Decrease speed of mixing to 600 rpm and add cooled phase D to phase ABC. Cool to 40°C.
7. In order, add phase E ingredients to phase ABCD. Formulation becomes more viscous. Ensure all ingredients are incorporated well, mixing with spatula if needed.
