ASPUN™ 6000 Polyethylene Fiber Grade Resin for Nonwoven Fabrics

Main Characteristics

ASPUN™ 6000 Polyethylene Fiber Grade Resin is a new polyethylene resin complementing the ASPUN™ Fiber Grade Resin portfolio, produced on the proprietary solution process of The Dow Chemical Company. By introducing ASPUN™ 6000 Polyethylene Fiber Grade Resin, Dow is broadening its resins offering with a solution that helps customers meet key performance requirements in hygiene and medical applications. This innovative resin is designed for monocomponent and bicomponent spunbond applications and fulfills customers’ demand for excellent cloth-like haptics, while also offering a fine balance of improved softness, comparable tensile strength, and significantly improving abrasion resistance for hygiene and nonwoven applications.

ASPUN™ 6000 Polyethylene Fiber Grade Resin has been designed in order to improve spinning performance as well as thermal bonding performance by optimizing the molecular design of the polymer including the thermal properties. The new resin has a melt flow index of 19 g/min and a density of 0.935 g/cm³ which provides an improved bonding window of the nonwovens web in the spunbond process. This ASPUN™ resin is using a new formulated stabilization package, designed for improved long term processability.

The resin offers excellent elongation properties, drape, and haptics combined with improved abrasion resistance when combined with other materials in bicomponent fibers. Used purely, the ASPUN™ 6000 Polyethylene Fiber Grade Resin provides nonwovens with softness and drape in a class of its own as well as improved abrasion resistance and a balanced profile of mechanical properties.

In addition, the resin complies with stringent industry standards in Europe and North America:
- U.S. FDA 21 CFR 177.1520(c)3.2a

Figure 1 clearly illustrates the improvement on the drapeability comparing monocomponent homopolymer (hPP) spunbond nonwoven versus bicomponent and monocomponent spunbond polyethylene. Figure 2 demonstrates the improvement on the abrasion resistance of the new ASPUN™ 6000 Polyethylene Fiber Grade Resin versus standard ASPUN™ resins.
A Commitment to Sustainable Nonwoven Innovation

Dow assesses sustainability by considering the full life cycle of a product—an objective, scientific approach that provides a comprehensive view of a product from cradle to grave (or cradle to cradle, when alternative end-of-life options are available). In hygiene nonwovens, Dow is addressing the need to decrease product weight, reduce waste, improve energy efficiencies, promote better end-of-life options, and find viable alternative material solutions through the use of renewable resources—without sacrificing performance of the end product. Advancements in ASPUN™ Fiber Grade Resins have allowed for down gauging, without sacrificing performance—an important sustainability trend in hygiene nonwovens.

Always Working on the Next Breakthrough

Every day, the technical team at Dow is at work—answering our customers’ toughest questions, collaborating on the next great nonwoven idea, or using our own fiber spinning equipment in Europe and North America to test each and every one of those ideas… until it’s perfected. Dow is well aligned with the leading nonwoven equipment manufacturers for testing and scale-up of our resins. So, when you buy resins from Dow, you’re getting some of the most innovative materials in the nonwovens industry as well as the confidence and support you would expect from a world leader in material science and technology. Dow is constantly working on the next ASPUN™ innovations, so be on the lookout for more to come.

The principles of Responsible Care® and Sustainable Development influence the production of printed literature for The Dow Chemical Company (“Dow”). As a contribution towards the protection of our environment, Dow’s printed literature is produced in small quantities and on paper containing recovered/post-consumer fiber and using 100 percent soy-based ink whenever possible.

NOTICE: Any photographs of end-use applications in this document represent potential end-use applications but do not necessarily represent current commercial applications, nor do they represent an endorsement by Dow of the actual products. Further, these photographs are for illustration purposes only and do not reflect either an endorsement or sponsorship of any other manufacturer for a specific potential end-use product or application, for Dow, or for specific products manufactured by Dow.

NOTICE: No freedom from infringement of any patent owned by Dow or others is to be inferred. Because use conditions and applicable laws may differ from one location to another and may change with time, the Customer is responsible for determining whether products and the information in this document are appropriate for the Customer’s use and for ensuring that the Customer’s workplace and disposal practices are in compliance with applicable laws and other governmental enactments. Dow assumes no obligation or liability for the information in this document. NO WARRANTIES ARE GIVEN; ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED.

NOTICE: If products are described as “experimental” or “developmental”, (1) product specifications may not be fully determined; (2) analysis of hazards and caution in handling and use are required; (3) there is greater potential for Dow to change specifications and/or discontinuе production; and (4) although Dow may from time to time provide samples of such products, Dow is not obligated to supply or otherwise commercialize such products for any use or application whatsoever.

NOTICE REGARDING MEDICAL APPLICATION RESTRICTIONS: Dow will not knowingly sell or sample any product or service (“Product”) into any commercial or developmental application that is intended for:

c. use as a critical component in medical devices that support or sustain human life; or

d. use specifically by pregnant women or in applications designed specifically to promote or interfere with human reproduction.

Dow requests that customers considering use of Dow products in medical applications notify Dow so that appropriate assessments may be conducted.

Dow does not endorse or claim suitability of its products for specific medical applications. It is the responsibility of the medical device or pharmaceutical manufacturer to determine that the Dow product is safe, lawful, and technically suitable for the intended use. DOW MAKES NO WARRANTIES, EXPRESS OR IMPLIED, CONCERNING THE SUITABILITY OF ANY DOW PRODUCT FOR USE IN MEDICAL APPLICATIONS.
